Problem statement

Students at the University of Eswatini face challenges in managing academic tasks due to the lack of a centralized system for tracking assignments deadlines and tests dates. Important dates are sometimes forgotten or overlooked due to poor organization or lack overcentralized system to track academic activities.

Currently, many students use informal methods such as writing in notebooks or relying on brain memory, which are not reliable for managing multiple deadlines also the frequently checking of Moodle. In some cases, students use different applications that are not integrated, making it difficult to have a clear overview of all academic responsibilities

This lack of an organized and centralized system leads to missed deadlines, late submissions, reduced academic performance and increased stress among students. Therefore, there's a need for a simple, centralized system that allows students to track assignments, tests dates and deadlines in one place while providing timely reminders

Objectives

1. To design a user-friendly platform for students to record and track assignments deadlines
2. To enable students to view upcoming tests and important academic dates in one place
3. To implement a reminder feature that alerts students about approaching deadlines and tests dates
4. To provide an organized dashboard that displays all academic tasks clearly
5. To improve student time management and reduce missed deadlines
6. To create a centralized system that simplifies academic planning for students
